

Examples of Problem of Induction

he "give us something better" has been a recurring problem this with for a long time. detracts you from the problem at hand. Philosophers have know that problem forever. **Only suckers don't have that instinct.** Further, take the sequence $\{1,2,3,4,x\}$. What should x be? Only someone who is clueless about induction would answer 5 as if it were the *only* answer (see Goodman's problem in a philosophy textbook or ask your closest Fat Tony). Not only clueless, but obedient enough to want to think in a certain way. 2) Real life never never offers crisp questions with crisp answers (most
