Linear algebra in 3000 bullets

Zhigang Suo @zhigangsuo

- Everything about AM 21b 2017
- Everything about AM 21b 2018
- Linear algebraic equations
- Row reduction
- Introduction to vector
- Introduction to linear map
- Number, scalar, vector, linear map
- Matrix
- Subspace
- Basis
- Null space, column space, row space of a matrix
- Change of basis
- Matrix of linear map
- Operator
- Determinant
- <u>Eigenvalue</u>
- Complex eigenvalues
- Inner product
- Orthogonality
- Symmetric matrix
- Quadratic form
- Singular value decomposition
- Pseudoinverse

Applications of linear algebra

- Sankey diagram
- Applications of linear equations
- Leontief input-output model
- <u>Difference equation</u>
- Markov chain
- Differential equation
- Population dynamics of owl-rat system
- Oscillation of a spring-mass system
- Elastica
- Least squares
- Fourier series
- <u>Legendre polynomials</u>

- Viewers rank movies
- Principal component analysis
- Singular value decomposition of homogeneous deformation

Older notes

- Scalar
- Scalar-scalar linear map
- <u>Vector</u>
- Linear map
- Linear form
- Bilinear form
- Symmetric bilinear form
- Linear map and bilinear form

A few general mathematical terms

- Set and tuple
- Cartesian product
- Map
- Complex number
- <u>Number</u>
- Group
